“Surround yourself with sound,
not speakers”

five two series

'Five channel surround sound from only two front speakers'

You only have to go to the cinema to realise what you're missing when you watch movies on TV without a decent home theatre system. However, for many, the conventional 5.1 surround sound set-ups are such a hassle to install. For a start, you've got to find room for six speakers and they all have to be placed in exactly the right position, irrespective of whether or not they look good there. Cables have to be run along walls or under the floor to reach the rear effects speakers. And your room ends up looking more like a hi-fi store than a place to relax.

Not any more. The KEF *five two* series provides true five channel surround sound but from only two speakers and gives the same detailed 3D sound image wherever you sit. The sense of 'being there' is spellbinding. But there's nothing magic about

it - just clever technology you won't find elsewhere. We've crammed everything we've learned in 45 innovative years of award-winning high-end loudspeaker design into the *five two* series. The result is sound for the way we live today.

Like all great ideas, the concept is simple. The vertical flat panels behind the main speaker drivers act as rear effects speakers, while the front facing Uni-Q® drivers create perfect left, centre, and right speakers - just like the movies. The effect is certainly impressive, with pin-sharp dialogue and amazing surround effects.

Available in a choice of either matt silver or high gloss black finishes and supplied with connection cables for any 5.1 home theatre receiver/amplifier.

Uni-Q Technology

KEF's 'sit anywhere' Uni-Q technology disperses sound around the room so well that you can 'sit anywhere' to enjoy the optimum surround experience.

5 Audio Channels from 2 Speakers
